CONCRETE ADMIXTURES HANDBOOK, SECOND EDITION: PROPERTIES, SCIENCE AND TECHNOLOGY (BUILDING MATERIALS SCIENCE SERIES) BY V.S. RAMACHANDRAN PDF

Since the publication of the first edition ten years ago, significant developments have occurred in the use of admixtures in concrete. Eight new chapters and a full update of the preceding ten chapters bring this book up to date; reflecting the relative advances made in the science and technology of different groups of admixtures. The increased role and development of admixtures in concrete technology is evidenced by a number of conferences, publications, and novel admixtures available in the market place.

These developments in the field caused the modification of many chapters in the first edition in order to reflect the advances. Although individual chapters refer to standards and specifications of admixtures, those only interested in the standards or techniques used in investigating admixtures will find the second chapter (Research Technologies, Standards, and Specifications) useful. Admixtures are not as inert as may be presumed. They may chemically interact with the constituents of concrete and affect the properties of the fresh and hardened concrete and its durability. The third chapter deals with these aspects. It was important to devote a chapter to recent attempts in developing new admixtures.

All The Important Admixtures Are Included

By Aung Htun

".....The book is divided into 10 chapters and ALL THE IMPORTANT ADMIXTURES ARE INCLUDED.

Each chapter contains a list of important recent references that should be a useful guide for further reading. A chapter on "Cement Science" was included to describe the most recent concepts so that the information presented in subsequent chapters could easily be followed. The last chapter on "Patents" describes how a variety of materials (natural, synthesized or waste) can be utilized as admixtures for various purposes.

The handbook is intended for the scientist,
technologist and the practitioner.
It should be of use as reference material for the engineer,
architect,
concrete technologist,
manufacturer and use of concrete and concrete admixtures.
It is also intended for use by cement scientists,
material scientists and students of concrete technology....."
