Economics of Inequality

By cortezhill

Incomes and needs, wages and profits, wealth and poverty are the subject of much current debate. This book is contributon to the debate. It examines the concepts involved and the difficulty of defining them; it discusses the various theories which explain income differentials in terms of human capital, I.Q., education, or institutional power; and it assesses the effectiveness of government policy in limiting these differences. All this is a book about the distribution of income between persons - millionaires, doctors, manual workers, or pensioners - rather than between aggregate factors like land, labour, or capital.

The analysis is economic and the book is written for students of economics, but technical economic discussion is restricted largely to notes, and students of politics, sociology, and social administration will find that the book provides them with a useful basis for further study.
